TABLE OF CONTENTS

1. INTRODUCTION

1.1 General Description of the Present DØ Detector 1 1

1.2 Upgrade Project of the DØ Detector 1 2

1.3 General Requirements for the Superconducting Solenoid 1 2

2. COIL DESIGN

2.1 General Features 2 1

2.2 Conductor Selection 2 1

2.3 Winding Design 2 3

2.4 Conductor Joints 2 3

2.5 Winding Procedure 2 4

3. FIELD AND FORCE CALCULATIONS

3.1 2-Dimensional Field Calculations 3 1

3.2 Detailed Field Calculations Near the Solenoid 3 1

3.3 Integrated Field Uniformity 3 2

3.4 3-Dimensional Field Calculations 3 2

3.5 Decentering Forces 3 3

3.6 Stress Calculations by ANSYS 3 5

3.7 Analytic Hoop Stress Analysis 3 6

3.8 Displacement of Solenoid and Support Cylinder 3 7

4. MAGNET CRYOSTAT

4.1 General 4 1

4.2 Vacuum Vessel 4 1

4.3 Cold Mass Support System 4 1

4.4 Alignment of the Coil 4 3

4.5 Coil Thermal Design and Cool Down Characteristics 4 3

4.6 Loss of Vacuum 4 5

4.7 Liquid Nitrogen Cooled Shields and Intercepts 4 6

4.8 Radial Clearance and Tolerances 4 7

4.9 Assembling the Coil and Cryostat 4 7

5. SERVICE CHIMNEY

5.1 General 5 1

5.2 Routing 5 1

5.3 Vacuum Jacket 5 2

5.4 Internal Contents 5 2

5.5 Thermal Movement and Stress 5 3

5.6 Fabrication and Location of Field Break 5 3

5.7 Heat Loads 5 4

5.8 Vacuum Pumping and Relief Capacity 5 4

5.9 Magnet Cryostat Nozzle 5 5

6. CONTROL DEWAR

6.1 General 6 1

6.2 Mounting and Access 6 1

6.3 Vacuum Jacket 6 2

6.4 Vapor Cooled Current Leads 6 2

6.5 Liquid Helium Reservoir 6 2

6.6 Heat Loads 6 3

6.7 Loss of Vacuum 6 3

7. REFRIGERATION SYSTEM

7.1 General Requirements 7 1

7.2 Building Requirements 7 1

7.3 Flow Diagram 7 2

7.4 Hardware Components 7 2

7.5 System Heat Loads and Capacity 7 3

7.6 Refrigeration Control System 7 3

8. VACUUM SYSTEM

8.1 General 8 1

8.2 Insulating Vacuum 8 1

8.3 Electrical Feedthroughs and Guard Vacuum 8 2

9. CONTROL AND INSTRUMENTATION

9.1 Overview 9 1

9.2 Existing PLC System 9 1

9.3 System Instrumentation 9 2

9.4 Upgraded PLC System 9 3

9.5 Quench Protection Monitor 9 4

9.6 Control System Power 9 5

10. DC ENERGIZATION CIRCUIT

10.1 DC Current Regulated Power Supply 10 1

10.2 Ripple Filter 10-2

10.3 Dump Switch and Protection Resistor 10-2

10.4 Reversing Switch 10-3

10.5 Crowbar 10-3

10.6 Water Cooled Bus 10-3

10.7 Quench Detection 10-4

10.8 Interlocks and Controls 10-5

11. QUENCH CALCULATIONS

11.1 Quench Codes 11-1

11.2 Quench Study 11-1

11.3 Varying the Protection Resistor 11-2

11.4 Adiabatic Estimate of Conductor Maximum Temperature 11-2

11.5 Charging and Discharging the Solenoid 11-3

11.6 Protecting the Magnet Buses 11-7

12. MANUFACTURING TESTS

12.1 General 12-1

12.2 Approval of Design 12-1

12.3 Mandatory Testing of Components 12-2

12.4 Control Dewar and Chimney Tests at the Factory 12-2

12.5 Fully Integrated System Tests at the Factory 12-2

12.6 System Acceptance Tests at Fermilab 12-2

12.7 Magnetic Field Mapping 12-3

13. OPERATION MODES

13.1 Steady State Operation 13 1

13.2 Non Steady State Operation 13 1

13.3 Liquid Nitrogen System Operation 13 2

14. APPENDIX A: SYSTEM PARAMETER TABLE ..... A 1

15. APPENDIX B: FERMILAB SAFETY CONSIDERATIONS ..... B 1

16. APPENDIX C: APPLICABLE CODE REQUIREMENTS ..... C 1

17. APPENDIX D: RADIATION AND INTERACTION LENGTHS ..... D 1

18. APPENDIX E: CONDUCTOR STABILITY

E.1 Conductor Stability ..... E 1

E.2 Steady State and Transient Heating ..... E 1

E.3 The MPZ Theory ..... E 2

E.4 Applying the MPZ Theory ..... E 3

E.5 Conclusions ..... E 4

19. APPENDIX F: ALIGNMENT CONSIDERATIONS

F.1 General Remarks ..... F 1

F.2 TeVatron Requirements ..... F 1

F.3 Tracking System Requirements ..... F 3

F.4 Vertex Resolution Due to Misalignment ..... F 4

20. APPENDIX G: SUPPORTING DOCUMENTS ..... G 1
