

Download Split??

I'm not sure what is desired here, since I haven't been contacted directly. I can imagine lots of things. But first some reality.

- Making the download files small -> lot's/several of them
- Making the download files small -> you'll have to know more about exactly what it is you need.
- OR we can just download all of them, but then that's what we do now!
- It appears that people have a "wish list"
 - Small files -> lot's of them
 - Don't want to have to know anything

Download Split??

- “Binary” directories, each could be one file.
 - Bin 7.4/4.9GB
 - Lib 1.8/1.2GB
 - Tmp 0.3/0.3GB
 - Codegen ~0/~0
 - Rcpdb ~0/~0
 - Results ~0/~0
- Obviously the Bin directory is the big one. Do people want to download everything **but** Bin? Then build what they need? They’d have to know a lot to do so. But it could be faster than what they do now.
- Splitting Bin into “major” executables would be a possibility, but certainly not easy to do or to maintain.
