

Selecting the correct bcJetChunk

- bcJetChunk is selected using bcJetReco RCP file
- bcJetReco RCP is unique for:
 - different Jet algorithm
 - different tag algorithms
- BUT: if bcJetReco changes between releases, bcJetChunk cannot be found

Fallback option

- If bcJetChunk cannot be found, use the JetChunk to select the correct bcJetChunk
- No algorithm information
- Added two parameters to bcJetAnalyze.rcp (since t01.66.00)
 - bool useClusterAlgorithm = true;
 - RCP ClusterAlgorithm = <calreco CalCone07 >
